From the Managing Director's Desk

The Mazumdar Shaw Medical Foundation (MSMF) stands proudly with Narayana Healthcare, committed to making world-class healthcare accessible and excellent. Our mission is to unlock and nurture potential, bringing advanced healthcare within reach for everyone. Our mission is to make ground-breaking medical science accessible and affordable, delivering lasting benefits to communities today and for generations to come.

As the medical landscape evolves, advancements in diagnostic technology, data science, and artificial intelligence are reshaping healthcare. The traditional physician-patient-hospital model is giving way to a smart, interconnected system where wellness becomes an empowered choice. Seamless integration of information, education, physicians, hospitals, and research enables early detection and management of diseases, making longevity a tangible reality.

Leading this transformation, MSMF focuses on translational research, fostering an environment where possibilities turn into actionable innovations. The Mazumdar Shaw Centre for Translational Research (MSCTR), the Mazumdar Shaw Technology Business Incubator (MSMF-TBI), the Advanced Diagnostic Research Centre, and the Mazumdar Shaw Cancer Outreach Program (MSCOP), in partnership with Narayana Healthcare - Mazumdar Shaw Medical Centre (MSMC), is a powerful scientific enterprise ecosystem, pushing the boundaries of healthcare.

As we move into a new dimension of future healthcare, MSMF serves as a critical bridge between emerging science and clinical application, maximizing opportunities for entrepreneurship to thrive. The Clinician-Scientist-Entrepreneur Axis is at the heart of this progress, and MSMF embodies this forward-thinking approach to healthcare innovation.

Professor Dr Paul C Salins
Managing Director, MSMF
